

Vyorius Test

Develop a simple C++ console application that integrates a Large Language Model (LLM) to process user input and provide AI-generated responses.

Deliverables:

- **Source Code:**
 - Well-documented C++ source code for the application.
 - Comments explaining key sections (e.g., API integration, input/output handling).
- **Demonstration:**
 - A brief video or live demonstration: User Input, The application's interaction with the LLM, Response display.
- **ReadMe Documentation:**
 - Setup instructions for running the application.

Note: Please submit your solution within the given timeframe, and feel free to ask any questions if you need further clarification on the task requirements. Good luck with the task!
